

ATALIS NOTAM Management

A powerful Aeronautical Information Management system looking towards the future...

ATALIS NOTAM Management offers all the relevant functions required by an International NOTAM Office (INO) to provide increased reliability and quality of Aeronautical Information, in full compliance with ICAO and EUROCONTROL recommendations.

Integrated with ATALIS AIXM Aeronautical database, ATALIS NOTAM Management paves the way towards the future xNOTAM standard.

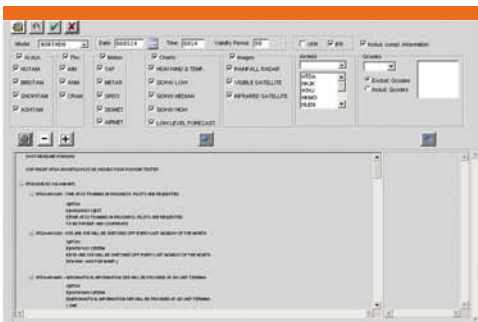

ATALIS NOTAM Management implements an International NOTAM database and automated processing which advantageously replaces traditional manual NOTAM processing.

All the necessary but fastidious work like checklist preparation, replies and processing in general, NOTAM repetition, assembly of multipart messages is automatically handled by the system.

Proper message syntax and semantics insuring system interoperability is no more a burden task; the system takes care of it all; operators just need to concentrate on the actual information.

Highlights

- User-friendly graphical HMI enabling an easy learning and a safe use of the system
- NOTAM history to track operator's actions.
- NOTAM repetition and checklist compatible to both ICAO and EUROCONTROL formats.
- Powerful integration with **ATALIS AIXM** Aeronautical database.
- Textual and graphical Web interface
- Hot/Standby architecture for high disponibility
